

ENVIRONMENTAL POLLUTION IS A GLOBAL PROBLEM

Chitra Shankarrao Raut

Abstract:

The problem of pollution is the biggest problem facing human society today. Pollution has been rising very fast since the last few years. All the world's pollution is worrying for the losses. All scientists in the world are publishing related reports for pollution. And you are already advised about the issue. The impact of the industrial revolution began to appear on the environment. The shores of forests started to start. Instead bigger buildings, factories were started. This is why the problem of pollution is standing on your head. Pollution makes room temperature increasing. Ozone has punch. River - Animals in the sea are dying. The atmosphere of many people is changing. The main reason for this terrible social problem is deforestation and industrialization, deforestation, natural resources etc.

Objectives :

- 1) To save the whole earth and the universe.
 - 2) To prevent global pollution.
 - 3) Human health, natural resources - to protect wealth.
- Some important examples of pollution: -
- 1) Water Pollution - Irrevocable water, water pollution, factory chemicals mixed with water, pond, river etc. So there is water pollution.
 - 2) Air Pollution - This is mainly due to carbon monoxide emitted from farther fumes and vehicles.
 - 3) Sound pollution - noise, noise of loud noise, noise from the vehicle, factory machinery, vehicle noise and pollution.
 - 4) Soil pollution - It reduces fertility in soil and mixes poisonous substances in it.

Results of pollution :

More than one crore people die every year due to pollution in the world. All kinds of animals are its ecological components, such as wind, soil, mountains, forests, its animals, plants, microorganisms, pests,

desert, ice-cold frosts, seas, rivers. Due to crowded crowds, factories, pollution, increasing number of vehicles, pollution and environmental pollution due to diuretic holes are taking place. Pollution is adversely affected. Pollution produces lung and respiratory diseases.

Pollution control :

- 1) In order to regulate the collection of old and used batteries and to create a rotating environment, the Government of India has released the rules for handling the acidic battery management and handling system in the year 2001.
- 2) It is necessary for the public to show awareness while preventing noise pollution.
- 3) Sailens zone solution in hospitals, camps,
 1. Turn Off Sound Pollution.
 2. Your T. Keep the noise of the music system equipment.
 3. Do not mount a car horn while you are in need.
 4. No horn for more than 70 decibels. The action is

taken by the accused under the Motor Vehicles Act 1988, as per the rules of the horn, and the penalty is to pay a penalty of 500 rupees.

Impact of National Pollution on Human Health :

- 1) Pathophilic microbes - There are many types of micro germs, viruses that flow from the stools. In the absence of proper processing of the infected water, infectious diseases spread through polluted water.
- 2) Banished areas - There are air pollution in homes, factories, theaters, offices, undercurrents etc., in the closed space, which impacts human health.
- 3) Transportation equipment leads to diseases due to various sounds and machines, factories, bhanges, scooters, aircraft and other reasons. This is due to stress, cardiovascular disease, heartburn, anxiety, mental retardation, high blood pressure, nausea, headache, asthma etc. Become disorders.

Conclusions :

Stopping the growth of the city and the metropolis, and creating a small number of towns at some distance away from the city. The state should have complete control over civic administration as well as civic, clean, safe, cultured, beautiful and clean air should be clean. It should not be a scandal to fill the stomach for the citizens. Recently the smart city scheme seems to be implemented by the government. In view of the purification of the residents of Shahar, the municipal corporation will implement the scheme.
