Abstract:

In daily life of the human being the safe, clean, healthy and supportive Environment is essential in every day. The good quality of natural environment provides basic needs in terms of clean air, water and healthy food production. The study of human social Responsibility means to save the environment, nature or precaution in different ways to save the environment. In present days, Biodiversity loss means air pollution, water pollution, Deforestation, Global warming, rise in temperature in earth day by day, decreasing the ozone layer it is a very big question mark in the country.

Key words: *Social Responsibility, Save Environment, Nature*

Introduction:

The earth's Environment or nature it is a largest combination of Air, water and land. Save all the three major combination of the Earth's surface is essential and big challenge for us. The present paper deals with the precautionary measures that should be taken by the individuals and the government for better future of world. The purpose of below discussion is to spread awareness about the serious matters such as Deforestation, Water pollution, Air pollution and Global warming among the people, specially to the youth, for the bright future of the country.

Discussion:

Water is the more abundant or important in the earth's surface with allover 71% in the earth's surface. All the human and animal life Aquatic and marine ecosystem, all the aquatic plant, sea shore and maintain the food chain of all the aquatic sea creature. The water is polluted in number of ways, contamination of water bodies including lake, river, ocean and other ground

water, disposal of toxic chemicals and industrial waste mix with them and the water is polluted in number of ways. The plastic bags, use and throw material and other plastic materials are responsible for water pollution in oceans and river bodies, in these ways the rivers, seas & oceans gets polluted by these pollutants and disturb the aquatic food chain in all the aquatic species. So, the use of plastic material should be minimized.

Air Pollution is the very serious problem in today's modern time. It is causing a serious problem also poisoning the environment including the air, water and soil. The major and main source of air pollution are the fuels, coal, petroleum and industries. Coal consists of minerals, Sulphur and nitrogen. Petroleum consists of hydrocarbon, Sulphur and nitrogen. Burning of the fossil fuels produce oxides of carbon, nitrogen and Sulphur which causes air pollution by releasing very harmful chemicals in the air. According to section 2B of the air (prevention and control of air pollution) act

1981 air pollution means the presence of any air pollutant in atmosphere.

Deforestation, the large-scale removal of trees from the forest (or other lands) for the facilitation of human activities. It is a serious environmental problem, it can result in the loss of biodiversity, damage to natural habitat, disturbances in the water cycle and soil erosion.

The number of effects of deforestation is, major climate change, increase in temperature and pollution level, loss of food and habitat of animals which leads to extinction, decrease in groundwater level, increase in level of temperature leads to Global Warming.

In air pollution in the daily needs each and every person use a vehicle. In environment it is a mixture of various gases such as nitrogen, oxygen, helium, hydrogen maintains the uniformity of all these gases. Burning waste and fossil fuels, vehicle emissions, Industrial polluted air, and many more factors which are responsible for the air pollution.

Conclusion:

In number of ways to help, save the environment, self-awareness and personal efforts, organizing workshops in many schools and colleges visit a ruler area and

knowledgeable lecture to the awareness of the environment, save tree plantation and water sorting of waste, reducing the use of non-recyclable materials.

In Indian people the bicycle or Electric Vehicle are much more efficient or compulsory to control the air pollution and it is environmentally beneficial to the whole country.

Tree plantation is compulsory in each and every school and colleges “One Student, One Tree Mission” must be successfully started in the whole country. So, to control the Deforestation and to protect human life and animal species from global warming, required initiatives must be taken by individuals and government to save the environment in future days.
